CS313 Theory of ComputationAutomata, Computability and Complexity: Theory and Applications, 1/E., Elaine A. Rich, 2008 is the compulsory textbook. A great resource is also Theory of Computation, by Michael A. Sipser, 2nd edition. Architects' Data Cover of the 3rd English editionAuthorErnst NeufertOriginal titleBauentwurfslehreCountryGermanyLanguageGermanSubjectarchitectural drawing; human factors and ergonomicsPublisherBauwelt-Verlag (German 1st ed.)Lockwood (English 1st ed.)Publication date1936Published in English1970ISBN9780258965092 Architects' Data (German: Bauentwurfslehre), also simply known as the Neufert, is a reference book for spatial requirements in building design and site planning. First published in 1936 by Ernst Neufert,[1] its 39 German editions and translations into 17 languages have sold over 500,000 copies.[2] The first English version was published in 1970 and was translated from the original German by Rudolf Herz. History Teaching at Weimar's Bauhochschule from 1926 after graduating from the Bauhaus, Ernst Neufert began to collect data about building, in a way of rationalization.[2] It was first published in 1936, as a handbook for students and architects. Since then, more than half a million books have been printed, in 39 German editions and 17 other languages.[2] The first English edition was published in 1970. In the US, it competes with the most common Architectural Graphic Standards and is little known compared to Germany.[3] Until 1986, Ernst Neufert was its editor, after which his son Peter took over the publishing with his company AG Neufert Mittmann Graf Partner, until his death in 1995. Contents The book is conceived to help the initial design of buildings by providing extensive information about spatial requirements. Dealing mostly with ergonomics and with functional building layouts, thousands of drawings illustrate the text, organised according to building typologies. Weighting now slightly less than two kilograms, it has been continuously updated. Influence The Argentine artist Guillermo Kuitca worked on the rationalization of architecture within its piece "Neufert Suite" in 1998. Organized largely by building type, it covers planning criteria and considerations of function and siting-and with over 6200 diagrams, it provides a mass of data on spatial requirements. Most of the featured illustrations are dimensioned and each building type includes plans, sections, site layouts, and design details. The book also includes an extensive bibliography and detailed set of metric/imperial conversion tables. Architects' Data starts with the basics of designing for a new building project, before moving on to covering everything an architect needs to know. It also looks at the design styles and specifications for creating different types of structures, such as those made for residential, religious, cultural, sports, medical, and other types of occupation. Covers user requirements, planning criteria, basic dimensions, and considerations of function and siting Includes numerous examples and over 6200 illustrations and tables 5th English edition of the classic, international reference for architects Architects' Data is an excellent resource for architects, building surveyors, space planners, and design and build contractors everywhere. ON Group similar results Feedback IX, 636 S., zahlr. Pläne, Skizzen, Tab., Reg. 4" Br. *neuwertig*, Paper Back. Condition: Fine. Second International Edition. From Airports to youth hostels, 400 pages of building types, tables, checklists, planning data, over 3000 plans, sections, diagrams, bibliography, references; xiv, 434 pages. ; 295 x 210mm. Paperback. Condition: New. 4th Edition. Language: English. Brand New Book. Neufert's Architects' Data is an essential reference for the initial design and planning of a building project. It provides, in one concise volume, the core information needed to form the framework for the more detailed design and planning of any building project. Organised largely by building type, it covers the full range of preliminary considerations, and with over 6200 diagrams it provides a mass of data on spatial requirements. Most illustrations are dimensioned and each building type includes plans, sections, site layouts and design details. An extensive bibliography and a detailed set of metric/ imperial conversion tables are included. Since it was first published in Germany in 1936, Ernst Neufert's handbook has been progressively revised and updated through 39 editions and many translations. This fourth English language edition is translated from the 39th German edition, and represents a major new edition for an international, English speaking readership. Reviews of the Previous Edition: "Neufert's Architects' Data was the first book I bought when I started my studies in architecture. It was invaluable for me then and it is still a useful aid in my designs."Cesar Pelli "With this thorough rewrite Neufert has produced yet again an invaluable reference book." The Architects' Journal. Page 2
